Listing of Claims:

Claims 1-6(canceled).

7(original). A method for manufacturing a ceramic capacitor, comprising the steps of:

- (a) making unsintered ceramic powder;
- (b) forming ceramic green sheets by mixing the unsintered ceramic powder and an organic binder;
- (c) printing internal electrodes on the ceramic green sheets to provide electrode printed green sheets;
- (d) laminating the electrode printed green sheets;
- (e) cutting the laminated ceramic green sheets according to the printed internal electrodes pattern to provide chip-shaped laminated bodies; and
- (f) sintering the chip-shaped laminated bodies;

wherein the unsintered ceramic powder includes a primary component of a perovskite crystal structure in a form of ABO_3 and an additive containing an A-site component of the perovskite crystal structure.

8(original). The method of claim 7, wherein the A-site component ranging from about 0.05 to 0.1 mole is present in the additive with respect to 100 moles of the primary component.

9(original). The method of claim 7, wherein the amount of the additive is about 0.1 to 1.0 part by weight with respect to 100 moles of the primary component.

Divisional Appl. of 10/292,595
Preliminary Amendment dated: April 19, 2004

10(original). The method of claim 8, wherein an amount of the additive is about 0.1 to 1.0 part by weight with respect to 100 moles of the primary component.
